

Learning Styles Survey

Suggested timeframe of completion: Beginning of School Year- October 1

STEP 1

Knowing how you learn and process new information is a great advantage for your education. Being aware of your dominant learning style can help you focus on finding the tools you'll need to learn the material you are being asked to master. For instance, if you're having difficulty understanding the directions in your math textbook (and you are a visual or verbal learner), you may want to look for an online tutoring video to help you work through the challenge.
